### **Certificates of Products**

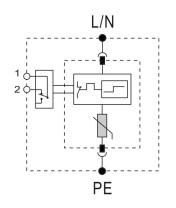

#### Description

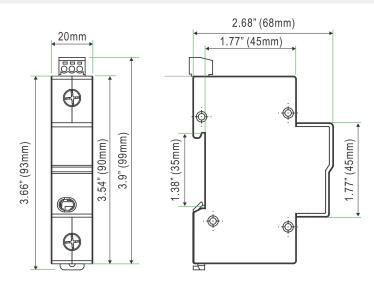

In accordance with: IEC 61643-11 - Class I+II and UL1449 Type 4 Location Location of use: main sub-distribution boards, branch sub-distribution boards One-piece compact design with minimized volume but maximized capability of Class I+II surge protection. Internal thermal disconnect devices help ensure safe or at end-of-life

### Surge Protection Connection Diagram

### Dimensions

# WatchfulEyE Surge Protective Device

#### **Remote Contacts**

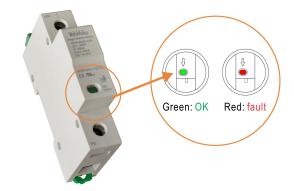

1: COM (Common)

2: NC (Normally Close)

Contact Ratings	125VAC/3A, 250VAC/1.5A	
Terminal Cross Section	Max. 1.5mm²	
Stripping Length Contacts	0.25 inches (6-7mm)	
Remote Terminal Torque	0.25Nm	

### **Fault Indication**

#### **Common Terms and Definitions**

1. Normal operating voltage rating (Un)

2. Maximum Continuous Operating Voltage (Uc/MCOV):

Maximum r.m.s. voltage, which may be continuously applied to the surge protective device's mode of protection.

3. Nominal Discharge Current for Class II Test (In):

crest value of the current through the surge protective device having a current waveshape of 8/20µs.

4. Maximum Discharge Current (Imax):

Crest value of a current through the surge protective device having an 8/20µs waveshape and magnitude according to the manufacturers specification. Imax is equal to or greater than In.

5. Voltage Protection Level (Up):

Maximum voltage to be expected at the surge protective device terminals due to an impulse stress with defined voltage steepness and an impulse stress with a discharge current with given amplitude and waveshape.

6. Residual Voltage (Ures):

Crest value of voltage that appears between the terminals of an surge protective device due to the passage of discharge current.

7. IEEE 62.41

CATEGORY C: outdoor overhead lines, service entrance (most severe)

CATEGORY B: major feeder, short branch circuits, service panel (indoor)

CATEGORY A: long branch circuits, receptacles (indoor) (least severe)

#### How to choose a suitable Uc(MCOV) value

Note: Uc >1.15Un

The relationship between two parameters Uc and Up of a surge protective device is proportional.

If Uc is small, the value of Up is also small; surge protective devices with smaller Up can provide better surge protection. Whether to choose smaller Uc depends on the voltage stability of the grid.

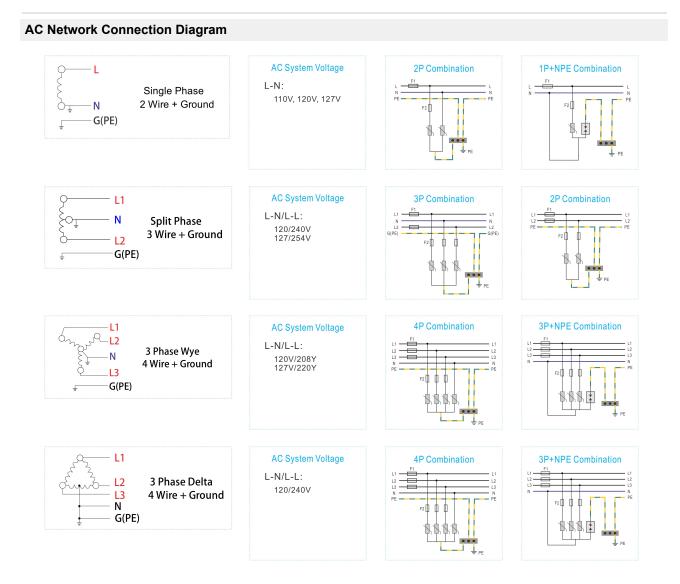

If you choose surge protective devices with smaller Uc for the grid with instable voltage, the surge protective devices will frequently work while the grid voltage fluctuates, resulting in shortening surge protective device's product life.

If you choose larger Uc, and the value of Up is accordingly large, the surge protective efficiency will not be so fine.

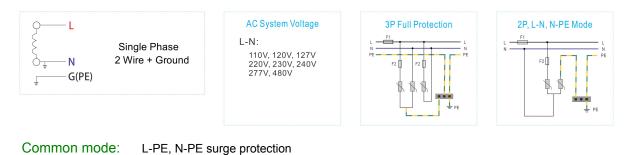

If you are unsure of the voltage stability of the grid,

it is suggested to calculate MCOV(Uc) using the following formula:  $\sqrt{2}$  Un < Uc <  $\sqrt{3}$  Un

AC Network (Un)	MCOV(Uc), L/N-PE Protection Mode
110V	150V
120/208V	150V
127/220V	150V
220/380V	275V, 320V, 385V
230/400V	275V, 320V, 385V, 420V
240/415V	320V, 385V, 420V
277/480V	320V, 385V, 420V
347/600V	550V, 690V

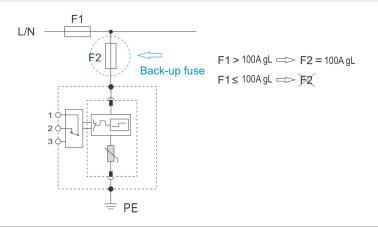

#### Difference mode & Common mode Connection Diagram

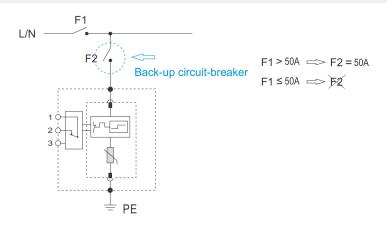

Difference mode: L-N surge protection

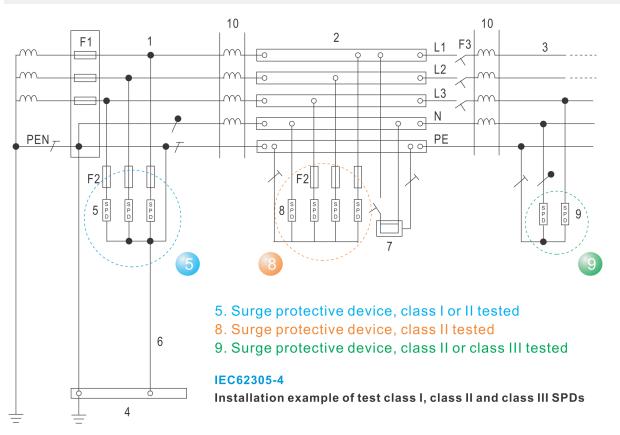

### Selection of back-up fuse

### Selection of back-up circuit-breaker

Application

Key

- 1. Origin of the installation
- 2. Distribution board
- 3. Distribution outlet
- 4. Main earthing terminal or bar
- 5. Surge protective device, class I or II tested
- 6. Earthing connection (earthing conductor) of the surge protective device
- 7. Fixed equipment to be protected
- 8. Surge protective device, class II tested
- 9. Surge protective device, class II or class III tested
- 10. Decoupling element or line length
- F1, F2, F3 overcurrent protective disconnectors
- NOTE Refer to IEC 61643-12 for further information.

### FAQ & Help

1. What should I do if I can't find the paper manual in the product packaging?

Watchful Eye products is committed to going green with paperless data sheets. On the side of each product enclosure is an engraved link with URL for downloading paperless data sheet and QR code of the website. If you need the paper data sheet, you can open the link and print the data sheet by yourself.

2. The advantages of fault indication windows?

If surge protection fails, the fault indication windows will turn red, thus it can be seen intuitively, and the surge protective device can be replaced in time to avoid damage to the equipment caused by a second surge.

3. What instruments can be used to test whether its surge protection function is normal or not? Test with a Watchful Eye surge protector tester

4. Can you list more applications? Power supply panel, whole house

5. What is the feature of Class I+II?

It provides high capability of Class I surge protection, and capability of Class II (equivalent to the parameters of WTH-40) fine protection with low residual voltage as well, applying to Class I and Class II surge protection in multiple areas. If you are not sure which module to choose for protecting your area, Class I + II is the best solution.
